Delivering the Power of IP

Axia Advantage Feature Server AAFS500

Feature Server– Voice Routing & Trunk Configuration With Ease

Axia's Feature Server is the industries market leader providing combined feature server and switch technologies. Deployed throughout North America and abroad, the AAFS500 enables ITSP's and other SIP providers the ability to offer SIP switching with enhanced PBX features delivered by trunk/line.

The software based platform runs within redundant server planes and is sized based on simultaneous user connections. The platform maintains a web based GUI for both resellers and end customers.

Beyond the redundant architecture and interconnected carrier capabilities, the system can connect direct to Axia's EZYBill solution to complete the entire telecommunications carrier platform.

The AAFS500 delivers Centrex style line features plus permissions restrictions, click to dial vm, voicemail-to email, queuing, three way line calling, click conferencing among many more.

Beyond The Competition

- Class 5 Feature Server
- Carrier Class Switching Architecture
- Real-time Unit Failover
- Hierarchal Trunk Management
- Username / IP Authentication
- Easy To Operate Web GUI Administration
- EZYBill (Telecom Billing) Connection

Technology Solutions That Deliver Value For your Business
