Delivering the Power of IP

Server Co-location Services

Server Co-location – Protection and Survivability

Axia's Co-location Services are offered in 12 partnered facilities across North America and provide high availability, secure locations for storing your critical data and servers.

Co-location facilities are rendered differently but all Axia partnered facilities have physical security requirements like: Biometric entry, full 24 HR video surveillance and recording, card key entry, keypad entry, and combination locked cabinets.

In addition to the physical security requirements the facilities all have redundant fiber paths, multiple upstream connections, UPS/PDU (battery) and generator backup power for the ultimate survivability.

The Axia partnered facilities do maintain SAS70, SSAE16, FISMA, PCI compliance standards.

Beyond The Competition

- Biometric Secure Facilities
- 24 HR Network Operation Staff
- 24 HR Video Surveillance & Recording
- UPS/PDU (Battery Backup) and Generator Power
- Redundant Fiber Paths
- Multiple Upstream Internet Connections
- Compliance Standards by Facility
- Designated DHS Site
