

AXIA TP

Delivering the Power of IP

Managed Firewall

Managed Firewall – Data Protection Managed

Axia's Managed Firewall service provides 24x7x365 protection of your network, files, and infrastructure. With certified network security resources on staff, Axia provides a wealth of knowledge and enterprise experience in protecting your network.

Firewall management is extremely resource intensive and often requires specific skill sets to maintain. Beyond the knowledge and experience, it is often costly to employ staff to manage these devices, proactively monitor 24x7, and keep up with released security patches and changes in VPN connections.

Axia's Managed Firewall service covers items like: VPN user changes, employee changes, application changes, updated software and security appliance patches, complete log monitoring, 24x7x365 proactive appliance monitoring, emergency response and intrusion detection, as well as configuration, installation, and design management.

Beyond The Competition

- Security Certified Engineering Staff
- 24x7x365 Proactive Device Monitoring
- VPN Management
- Proactive Security Manufacturer Patching
- 24x7x365 Log Monitoring
- Emergency Response & Intrusion Detection
- Configuration
- Compliance Management

Technology Solutions That Deliver Value For your Business
