

# VOIP SOLUTIONS

Axia nation-wide SIP trunking is a VoIP solution designed to support the needs of a wide range of businesses, from those with only a few lines, to those with the most demanding telecommunication needs. Axia's nation-wide SIP trunking service includes local numbers anywhere, long distance calling, and standard options such as DID numbers, E911 service, Local Number Portability (LNP) and directory listing. Imagine cutting monthly telecom costs by 60% while surpassing all the features of your current POTS, PRI, or VoIP service.

Although Session Initiation Protocol (SIP) was designed as a standard, there are still nuances between PBX manufacturers that make it extremely difficult to adopt a one size fits all SIP service, however, Axia engineers have certified our SIP trunks to work with a wide range of IP PBX, TDM PBX, and Key Systems.

SIP trunking services from Axia are guaranteed to provide you with a reduction in telecom operating costs and increase the overall survivability and resiliency of your voice network.
