Axia Technology Partners Shows Displays the Power of the Kerauno API All About the API Conference in Las Vegas

Indianapolis, IN – (July 18, 2016) – This week at the All About the API conAxia Technology Partners is rolling out the latest version of its Unified Communications platform, Kerauno, at ITEXPO in Ft. Lauderdale, Florida this week.

When it launched in October 2014, Kerauno created an immediate disruption in the Unified Communications space with its icon-driven dashboard, drag & drop functionality, and the idea that it shouldn't require a computer programmer to manage a phone system.

“We wanted to create a platform that wasn't just a next gen PBX,” said John Harden, Lead Software Engineer on the project. “No one should have to put in a support ticket to get a simple call flow created or have someone's name changed,” Harden added.

Over the course of the first year, AxiaTP listened to its customers and incorporated several new functions that are highlighted in the latest release.

- **DID Fax** enables the user to send and receive faxes using the same phone number as calls.
- **Increased Call Reporting** from trunk analytics to queues to agent levels.
- **Expanded Device Compatibility** enables Kerauno to work with more makes and models of phones, alleviating the need for companies to buy new hardware.
- **Active Directory Support** provides single sign-on capability.
- **Enhanced Email and System Alerts** inform system managers when there are issues.

“Our software development team has done a fantastic job of responding to the needs of our customers,” said Josh Ross, Owner and Managing Partner of AxiaTP. “Their ability to create solutions for business workflow challenges not only satisfies a specific client need, it makes for a better overall product.”

Over the course of the coming year, Axia Technology Partners will be migrating existing customers from its older PBX platform, Axia Advantage, to Kerauno. Both existing and new customers will benefit from the increased performance and features of Kerauno including anytime, anywhere, any device mobility, call management with Kerauno Presence, third-party software integration through the API, and real-time analytics and call reporting.

“Anyone can read about the features in a VoIP system, but moving from an old analog phone system to Kerauno has been a definite eye opener,” said Cory Palmer, SVP Technology at Citizens Bank. “The list of features packed into Kerauno is astounding, and I know my users haven’t even scratched the surface yet.”

For more information about Kerauno, or to register for an online demo go to the website at www.KeraunoUC.com.
